DETAILED ACTION

Election/Restrictions

1. The election of species made in paper No 16, filed on 11/2/01 is noted.

2. It is further noted that the applicants elected "hardened photoresists".

The examiner would like to note that the claims do not recite such specie. The claims recite "other hardened photoresits". It is believed that at least some of the specifically recited photoresits, such as ion-beam and ion-implanted photoresists are "hardened" photoresists and that the "other hardened photoresists" reference the photoresits, which do not include the specifically recited hardened photoresists.

It is possible that the applicants meant "other hardened photoresists". However, it is also possible that the applicants indeed meant "hardened photoresists", i.e. all hardened photoresists recited by the claims.

Accordingly it is not clear what is actually elected by the applicants.

Since the second interpretation of the election provides improper response to the election requirement, the election was interpreted as the election of the "other hardened photoresits". However clarification is requested..

Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 3-23 and 25-31 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Application/Control Number: 09/141,443

Art Unit: 1746

The claims are indefinite because the phrase "such as" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

The claims are also indefinite or/and incomplete because it is not clear how the coatings, films, layers or residues can be subjected to a post-rinse treatment when they have already been altered and removed in the previous steps.

The similar deficiency is additionally presented in some dependent claims, such as claim 25, which require additional steps applied to the coatings, films, layers or residues after they already been altered.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

- This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 8. Claims 3-23 and 25-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gupta et al (US Patent No 5,037,506) in view of Hawley's Condensed Chemical Dictionary, in view of Mayer et al (US Patent No 3,893,869) and further in view of Nachshon (US Patent No 5,114,834), Engelsberg (Laser-Assisted Cleaning Proves Promising), WO 97/17164, WO 95/07152, Engelsberg (US Patent No 5,024,968) and Engelsberg et al (US Patents No 5,643,472 and 5,531,857).

Gupta et al teach a method substantially the same as claimed except for the last laser cleaning step.

However, a precise cleaning and photoresists removal by lasers was conventional in the art as evidenced by Engelsberg, Engelsberg et al, WO 97/17164, WO 95/07152 and Nachshon.

It would have been obvious to an ordinary artisan at the time the invention was made to use laser processing in the process of Gupta et al after the solvent rinse with reasonable expectation of adequate results to more completely remove contamination

Application/Control Number: 09/141,443

Art Unit: 1746

from the surface of the wafer because the prior art teaches this step as a conventional and desirable.

It is noted that Gupta et al do not explicitly state that nitrous oxide is presented during UV treatment.

However, this gas is part of the air. See Hawley's Dictionary as an evidence.

Thereby, the claimed gas would be obviously presented.

Gupta et al do not specifically teach the use of ultrasonic-megasonic during the solvent treatment.

However, the use of ultrasonic-megasonic during liquid treatment of semiconductor wafer was notoriously well-known and conventional in the art. See at least Mayer et al.

It would have been obvious to an ordinary artisan at the time the invention was made to use ultrasonic-megasonic during the solvent treatment in the modified method of Gupta et al in order to enhance the contamination removal with reasonable expectation of adequate results because this was conventional in the industry way to enhance the treatment.
